Monday: Create map

Share experience

start at the end
- whats going to look like - long term goal
- List down all questions
- start with a rough draft

optimistic view → pessimistic view

Ask the professionals → interviews + take notes (sort into =/ categories)
Pick a target (customer, spot on the map)

CHALLANGE:
How might we help people plan a trip more easily and confidently without spending hours comparing options?

Background: Planning a trip can involve comparing destinations, transport, accommodation, activities, prices, reviews, and recommendations across many different platforms. While there is no shortage of information, making the final decisions can still take considerable time and effort.

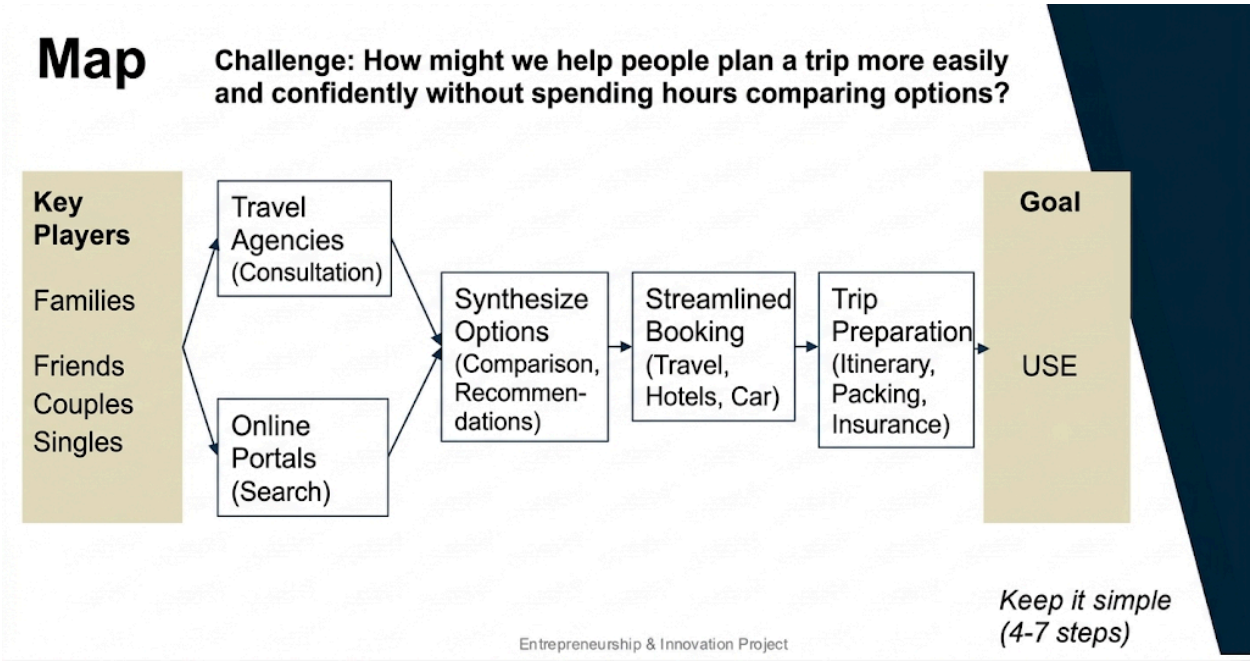

Possible angles to explore:
- Choice overload and too many options
- Trust in reviews and recommendations
- Budget and trade-offs
- Planning with other people
- Personalization: finding options that really fit the traveler
- How existing travel platforms currently address these needs

1. **Map**:

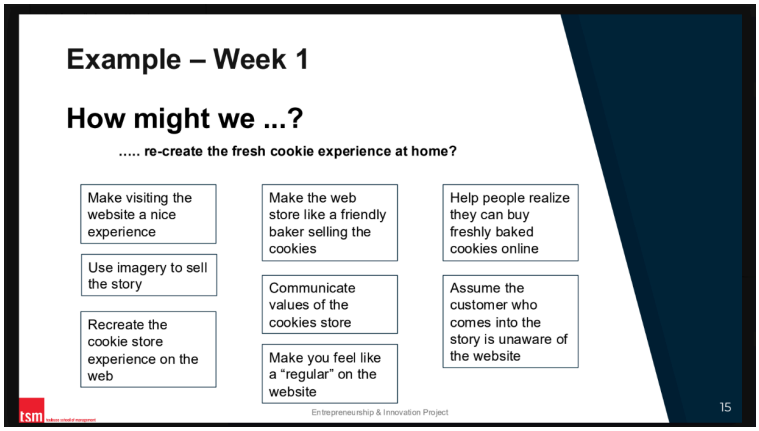

Customers + key players _____ Key goal
What connects the two (steps)

>Left side: List all the customers and key players: Families, Friends, couples and singles
>Right side: Write down the end goal of the sprint : USE
>Center: Which steps lead to your final goal?: (customers coming up with smth) research (websites and portals), booking (travel, hotel/airbnb etc., car, ensurance etc.), final planning (packing etc.)

I let gemini create a map:

2. How might we reach this goal? Everyone thinks about possible solutions, group them (e.g. web design, marketing, in store experience)
   How might we ...?
   1. Everyone puts possible products /services (potential market needs)
   2. Move similar ideas next to each other
   3. Vote on the ideas (each person has 2 votes)
   4. Pick one final idea

3. Who is the target?

   1. Who are potential users of your product/ service?
   2. Create a profile of a potential customer

Target Customer

DEADLINE 20.09.
